

Efficient centralization and standardization of your entire customs tariff and export control classification – globally

Correct customs tariff & export control classification of parts is a crucial yet often very difficult task in international trade. It is an essential part of corporate compliance and the key factor in the calculation of customs duties and the correct application of rules of origin.

One of the most common errors found in a customs audit is the use of inconsistent classifications for the same part – an easy win for the authorities, and an often expensive black mark for the company involved.

MIC's Central Classification System CCS helps companies precisely classify parts to conform to multi-national customs tariff schedules as well as export control lists while reducing costs and workload. Our software permits clear and easy control of the entire product classification process e.g. via a full workflow management with the ability to manage multiple teams on a global basis.
