HARDWARE

INSTALLATION

FAST TRACK

If an administration already has a server available, the WCO will confirm compatibility of existing hardware.

The WCO provides a software package for download. The local IT officer follows the installation guide with support from the WCO IT consultant.

REGULAR TRACK

If an administration needs to procure its own hardware, the WCO provides requested specifications.

Once hardware is acquired, the WCO provides a software package for download. The local IT officer follows the installation guide with support from the WCO IT consultant.

ASSISTED TRACK

If an administration pays for an assistance package, the software is bought on their behalf by the WCO IT consultant and shipped to the administration.

The software is installed by the WCO IT consultant on hardware before shipment to the administration. Once delivered, the local IT officer follows the last configuration steps with support from the WCO IT consultant.

TRAINING

The WCO organizes a national train-the-trainer workshop in cooperation with each administration. The workshop is usually organized at the Customs training lab in order to guarantee adequate IT infrastructure and technical support. The administration selects workshop participants, and is responsible for any costs associated with their attendance.
